

STERAMIST[®]: KEEPING ON SCHEDULE AGAINST CORONAVIRUS

OVERVIEW:

When an unexpected case of COVID-19 hit a pharmaceutical labeling facility, New Jersey-based TSN member Greenworks Environmental were called in to immediately treat the area quickly. Ideally, the treatment of the 10,000ft² facility would have to be completed before the upcoming night shift to avoid any delays in shipments.

THE RESULT:

Greenworks Environmental provided the labeling facility with their Rapid Decontamination Service, targeting high-touch areas and surfaces such as workstations, door knobs, phones, switches, and handles. With the use of SteraMist Surface Units, deployment and decontamination took only 4-6 hours and the night crew was able to resume operations immediately. Before and after decontamination, ATP readings were used to validate the efficacy (shown below).
